

QUICK-START GUIDE

WIRELESS TIMER SETUP – INDEPENDENT BEAMS AT START AND FINISH

Install a fresh 9V Alkaline (you'll need 5 of them) battery in:

1. The handheld SportTimer 3000
2. Each of the two YELLOW Beam transmitters
3. Each of the two BLACK Beam receivers

SETUP:

- Mount a Transmitter and a Receiver on opposite sides of your START line. Use tripods, free standing posts, universal brackets or any other convenient mounting method.
- Do the same for the FINISH line.
- Turn ON the small switch on the side of the two transmitters and the two receivers. Make sure they are pointed at each other and the Red LED light is glowing solid on the back of the receiver (BLACK box) at both the START line and at the FINISH line.

OPERATION:

- Turn ON the handheld SportTimer 3000 by pressing and holding the **START RESET** button for 3 seconds. You should see all zeroes on the display.
- Pass something through the START beam. The TIMER will ZERO instantly and start timing. Pass something through the FINISH beam, the TIMER will stop and display the time. It will always ZERO when it starts, so there is no need to reset each time.

For example, 43.509 seconds is displayed here:

- You have full manual control to STOP and START the Timer at any time by pressing the **START RESET** button just like any stopwatch.
- If a competitor does not finish at the FINISH line Beam, the Timer will keep running -- just STOP the timer manually with the **START RESET** button
- To turn OFF the Timer manually, it must not be running, so stop it manually if necessary. Press and hold the **MODE** button for 3 seconds and the display will go blank and the timer will turn off.

COMPLETE INSTRUCTIONS

This abbreviated Guide is intended to get you started. More features and capabilities are available and are discussed in the Users Manual. If you press the wrong buttons or get into a display mode that does not look right, just take the battery out and put it back in and you can turn the timer ON like usual.
